

AI EDIT CLOUD. NO LIMITS.

CLOUD POST- PRODUCTION, RUN FOR YOU.

One system for every rush, every edit and every review. Anywhere in the world, any time, inside a secure AWS cloud, built for you and run by us.

THE WAY POST WORKS TODAY

SOUND FAMILIAR?.

01

EXPENSIVE.

Premium city overheads, whether that's London, New York or LA. High data and export costs on every job. And while the technology has moved on, the prices never have.

02

INCONSISTENT.

Proxies made by hand, differently on every project, by different people. No two jobs are ever set up the same.

03

DISCONNECTED.

Work passed around on edit machines and drives, QC notes buried in email chains. No central place to see, share or sign off.

04

ISOLATED.

Siloed systems, with every project working differently. Footage scattered across hard drives, and no single source of truth anywhere.

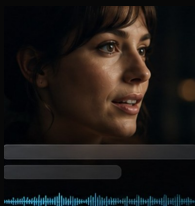

WE REPLACE ALL OF IT. WHETHER YOU DO IT YOURSELF, OR PAY A PREMIUM POST HOUSE.

WHAT MAKES US DIFFERENT

POST-PRODUCTION, UNCONSTRAINED.

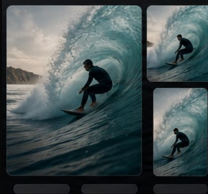

We're a cloud-based post-production company **with a difference**. The difference: we're constantly developing AI systems that improve quality, speed and cost. The AI does the heavy lifting; our team oversees every step and checks every frame.

BETTER. FASTER. CHEAPER. And as our AI improves, the savings pass straight to you.

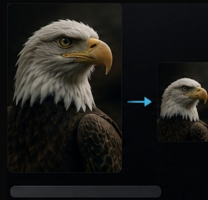

SUBTITLES.

AI transcribes, times and styles subtitles in minutes, in every brand style and aspect ratio. A fraction of the cost.

ASPECT-RATIO VERSIONS.

AI reframes for every platform: 16:9, 9:16, 1:1, inside every safe zone. Hugely reduced versioning time.

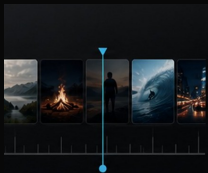

PROXIES.

Built automatically the moment footage lands: named, organised, edit-ready. Nobody touches a thing.

GRAPHICS.

AI accelerates lower-thirds, titles and versioning, so craft time goes on the frames that matter.

PULLS & SELECTS.

Any line, moment or take found across the whole library in seconds, not an assistant's day.

● COMING TO THE PLATFORM SOON

SEARCH EVERY FRAME.

We're constantly developing new AI capabilities. The next layer of the platform will turn your entire library into something you can search like a database: ask for a face, a logo, a spoken line or a single moment, and it surfaces across everything you've ever shot.

FACES & PEOPLE.

Every face detected and tracked across every clip and project. Name someone once and it applies everywhere, retroactively.

LOGOS & BRANDS.

Find any logo or brand mark with exact timestamps. Sponsorship proof, compliance and licensing, sorted.

ON-SCREEN TEXT.

Reads the text in the frame, lower thirds, titles and scoreboards, and makes all of it searchable.

THE SPOKEN WORD.

Every word transcribed and searchable. Pull a soundbite or a caption line in seconds.

SCENE INTELLIGENCE.

Recognises scenes, objects and moments, so you jump to the right moment, not just the right file.

FASTER THAN REAL TIME.

Analysis runs as the media ingests, so every result is ready before you need it.

FOR EDITORS & PRODUCERS

CUTDOWNS THAT TOOK HOURS, IN MINUTES.

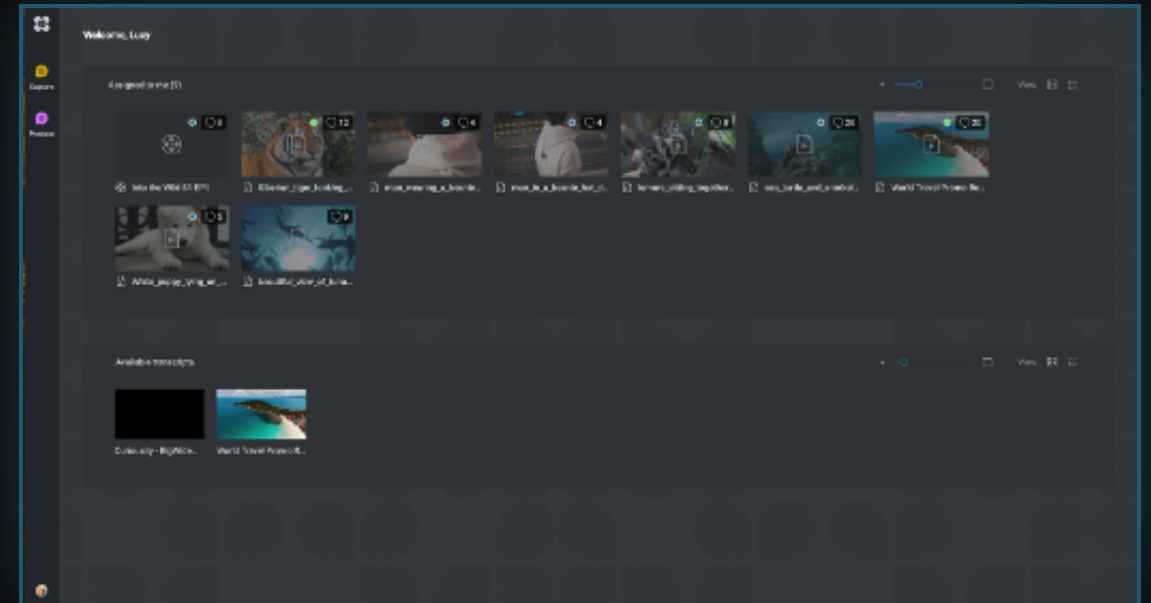

Find every usable moment across the shoot, drop it into a sequence, and hand it to the edit. It doesn't just speed post up, it revolutionises how producers and editors work.

THE IDEA

EVERYTHING IN ONE PLACE.

One portal where everything lives: footage, graphics, music and sound effects, all in one place on one system, across every project at once.

Whatever the job, open a project and it looks identical: rushes, cuts, music, graphics, exactly where you expect. Work one project and you know them all. No surprises, and everything moves faster because of it.

HOW IT WORKS · 1 OF 2

ONE SYSTEM, EVERY TIME.

Every production runs the same eight stages. Nothing improvised, nothing lost.

01 PRE-PRODUCTION PLANNING.

THE SPEC

Every production gets the same workflow document before a frame is shot: folders, codecs, naming, delivery specs.

COORDINATION

We speak with every DIT before production, so they know exactly what they're delivering.

YOUR SPEC, ADOPTED

Existing templates and naming conventions map straight in. Day one feels familiar.

02 ON LOCATION.

BACKED UP, TWICE

Two copies, two places, every shoot day. You always hold your own masters.

UPLOAD

As soon as the day's footage is wrapped, upload it straight in, up to 8K. We work with it the moment it lands.

NO MORE PROXIES

Never again: not on location, not in the office. Built here, the moment footage uploads.

03 INGEST, PROXIES & STORAGE.

COLD STORAGE

Hi-res masters stored safe the moment they arrive.

INSTANT PROXIES

As soon as the hi-res is in, proxies are built straight onto the system.

READY-BUILT PROJECTS

As soon as proxies are built, we group everything and build the project, ready for the editor.

04 REMOTE CLOUD EDIT.

ANY NLE

Editors cut remotely: Premiere, Resolve or Avid, anywhere in the world.

YOUR TEAM OR OURS

We supply UK editors or you bring your own.

ASSETS IN PLACE

Graphics, music and SFX central; open a project and it's all there.

HOW IT WORKS · 2 OF 2

FROM REVIEW TO WRAP.

05

REVIEW & APPROVALS.

INSTANT LINKS

The moment an editor exports, the link goes out.

RUSHES FROM DAY ONE

Footage viewable from day one, as soon as proxies are built.

NOTES TO TIMELINE

Frame-accurate notes feed straight back into the edit.

06

ONLINE & FINISHING.

ONLINE

In-house UK, or a full conform package with hi-res and editorial metadata to any facility.

GRADE & SOUND

Grade, mix and dub to broadcast spec.

EVERY DELIVERABLE

Masters, alphas, stems, editorial metadata, stills, cue sheets. Your exact spec, QC'd.

07

DELIVERY & ARCHIVE.

DELIVERY

Masters, cutdowns and platform formats to spec, on time.

ARCHIVE

Long-term cloud archive you reach yourself, no formal retrieval requests. Deep-cold rates for long-term keeping.

KEPT FOREVER

Rushes, proxies and masters, always in the same place.

08

SUPPORT.

24-HOUR COVER

Post supervision around the clock.

ONE STRUCTURE

The same system on every production, anywhere.

NEVER ALONE

A post producer and edit assistants always on hand.

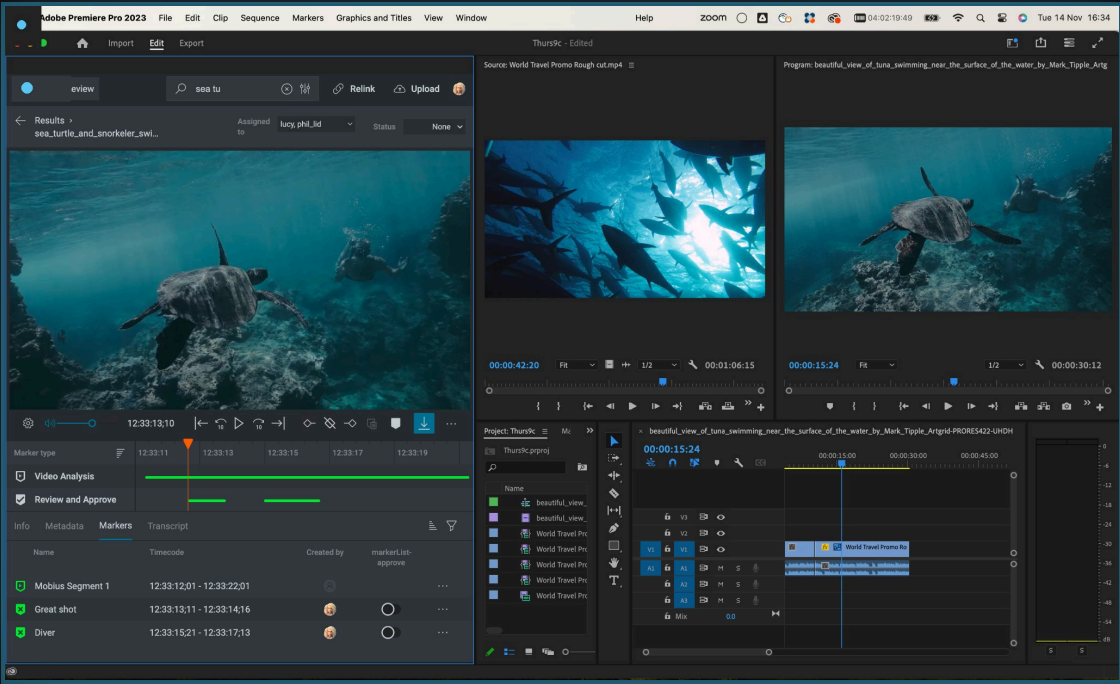

REMOTE CLOUD EDIT

EDIT FROM ANYWHERE.

Your editors sign into powerful cloud edit systems and cut exactly as they do today, from anywhere on earth. The footage never moves; the people do. Multiple editors, multiple projects, all at once.

All you need is a modern computer and a solid connection: we spin up high-spec edit machines in the cloud, so your speed comes from our hardware, not yours. We supply experienced UK editors, or your own team logs in; either way every asset is already in place. Need extra machines or screens? We can rent and supply those too.

* For the smoothest editing experience we recommend a wired Ethernet connection, or strong, stable Wi-Fi.

ADOBE PREMIERE PRO.

Fully integrated: rushes, selects and notes land directly in the timeline.

DAVINCI RESOLVE.

The same seamless loop, edit through to grade.

AVID.

Our dedicated Avid path: remote cutdowns and sharing, set up by us.

BUILT TO FLEX

SCALE UP. SCALE DOWN.

Need more editors tomorrow or fewer next week. More storage, more users, more processing power on demand? We scale the system with you, and nothing slows down. And because the machines are ours, you always work on the highest-spec kit going, and never have to buy, maintain or update an edit machine again.

01**MORE EDITORS, FAST.**

Spin up extra editors and machines the moment a job demands it, and stand them down just as quickly.

02**POWER ON DEMAND.**

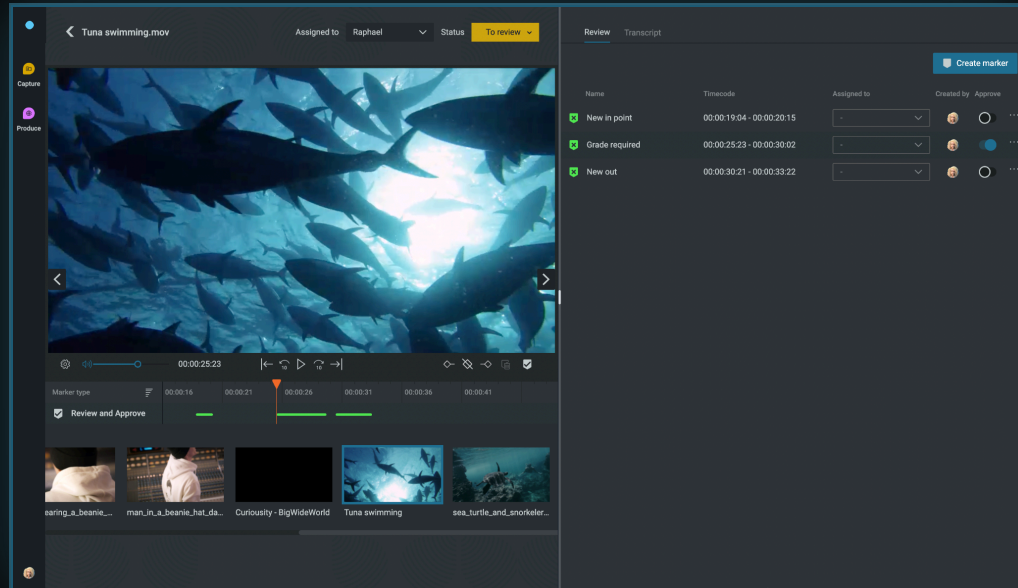

Add storage, users and processing power exactly when you need it. No hardware to buy, nothing to install.

03**ALWAYS TOP-SPEC.**

Our machines mean you're always on the fastest kit going, and never updating your own again.

THE GAME-CHANGER

THE PRODUCER DASHBOARD.

The moment the rushes land, everything is yours: every rush, every project, one sign-in for every producer and director you choose.

* Currently for Premiere Pro and DaVinci Resolve; Avid runs on its own path alongside.

01 VIEW ALL RUSHES.

From day one, named exactly as in the edit, with a full producer's player.

02 COMMENT & MARK UP.

Frame-accurate markers with history and approvals. Notes go to the edit; cuts come straight back.

03 FIND IT FAST.

Global search and a full folder tree: find any clip by name, project or metadata, instantly.

04 BUILD STRINGOUTS.

Drag the best moments into a sequence. No more Frame.io round-trips.

05 STRAIGHT INTO THE EDIT.

Selects and paper edits import directly into Premiere as a sequence.

06 NOTES BACK TO THE TIMELINE.

Editor sends a cut; your notes land straight back in their timeline.

07 UPLOAD & ASSIGN.

Push files in from the dashboard and hand out tasks in one channel.

08 SHARE SECURELY.

Watermarked links; every viewer invisibly fingerprinted, even on YouTube.

SHARE A CUT. KEEP CONTROL.

01

INSTANT LINKS.

The moment an editor exports, the link goes out. Straight to the right people, coordinated by us.

02

UNLIMITED VIEWERS.

As many people as you like, with tiered access. Clients see finished cuts, never the rushes, unless you choose otherwise.

03

NO EMAIL QC.

Notes and QC live on the frame, inside the platform. No email chains, no V2 folders.

04

NOTHING LEAVES.

Review and approval happen inside the platform. No copies floating around on email or public links.

Client monitors aren't included as standard, so no surprises: a live stream straight from the system is available as a paid option.

SECURITY

A PRIVATE CLOUD, CREATED FOR YOU.

Everything runs in a dedicated, private cloud environment on AWS, built and run entirely by us, exclusively for you. You do nothing. Your media is never mixed with anyone else's, access is governed by your rules, and your security team gets full oversight.

NOTHING LEAVES.

Every review and approval stays inside the platform.

TIERED ACCESS.

Every sign-in scoped, revocable in a click.

FINGERPRINTED.

Every viewer's copy invisibly tagged. If a cut surfaces anywhere, even YouTube, we know exactly whose it was.

MASTERS, TWICE.

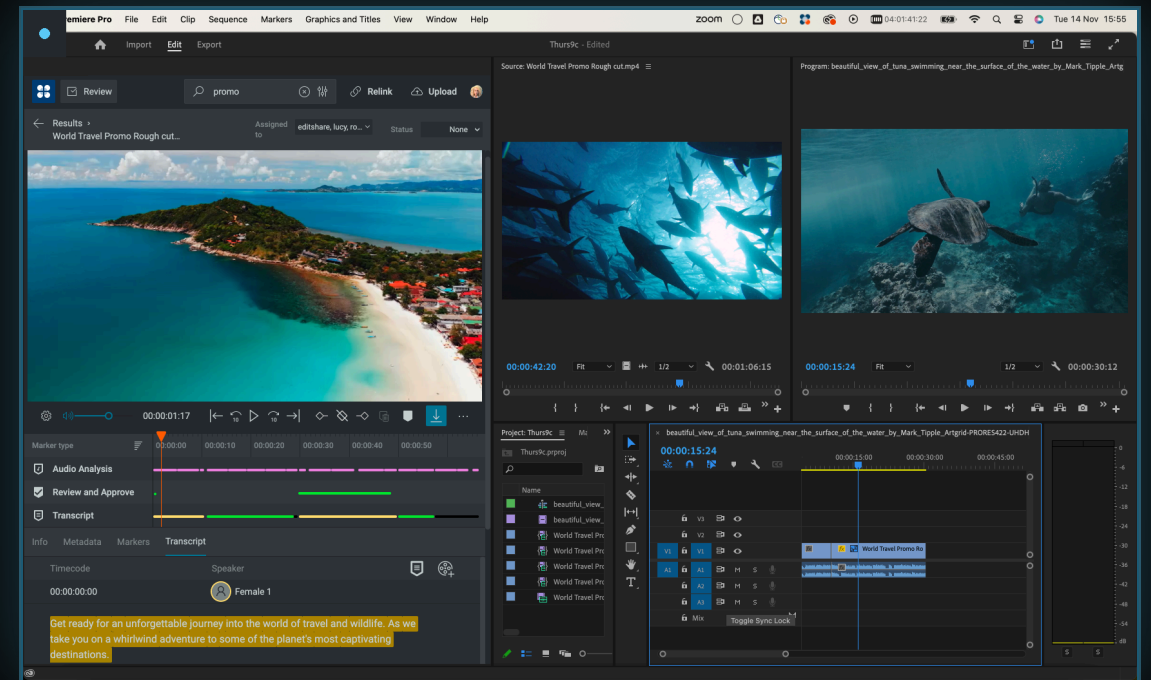

A local copy with you plus cold storage, with deep-cold archive for long-term keeping. Never one drive from gone.

UNDER THE HOOD

A PROPER MAM AT THE CORE.

A professional media asset management system sits underneath everything: the single source of truth that indexes, organises and connects every asset. We adapt it to exactly how you work.

Graphics, music and sound effects upload once to a central library, imported into the right place in every project. We can even build a master project for the assets you use everywhere. Whichever project you open, it always looks the same.

ONLINE, FINISHING & DELIVERY

FINISHED TO BROADCAST.

01 ONLINE.

In-house in the UK, or a full conform package, hi-res with all editorial metadata, to the facility of your choice. We create every deliverable.

02 GRADE & SOUND.

Full colour grade, mix and dub to broadcast spec. Your colourist, or ours.

03 EVERY VERSION.

Every aspect ratio and platform, safe-zone checked, captions styled per brand.

04 EVERY DELIVERABLE.

Texted and textless masters, GFX-only alphas, stems, editorial metadata, stills, cue sheets, project files. Your exact spec and naming.

05 QC'D, THEN DELIVERED.

Everything checked before it reaches you. Redeliveries handled in-system, not over email.

06 ARCHIVED FOR GOOD.

Masters, rushes and proxies in long-term archive you reach yourself, with deep-cold rates for long-term keeping.

POST-PRODUCTION, SUPERVISED

NOTHING LEFT TO CHANCE.

The system is only half of it. Behind it sits a post team that organises, plans and supervises every production from ingest to delivery.

01

ORGANISED & PLANNED.

Every project mapped before it starts. Your templates and standards adopted; schedules sanity-checked.

02

EDITORS, BOOKED & BRIEFED.

We book and coordinate the editors, ours or yours, ready before the rushes land.

03

THE SCHEDULE, HELD.

We run the timeline and keep every cut on track, week after week.

04

VIEWINGS, RUN.

Reviews organised, links sent, notes consolidated into one clear voice.

05

EDIT ASSISTANTS ON EVERY JOB.

Projects kept tidy, naming enforced, rushes synced. Nothing drifts.

06

A POST PRODUCER ON HAND.

One person who knows your production, working your hours, 24/7 support behind them.

**THE
END.**

THE END OF THE MINEFIELD.

Let's get you set up.
